

Acknowledgements

This book is written by experts for those who are interested in modern optics. It is the product of contributions from about 60 authors from industry and institutes. Their inputs, based on their daily work, provide professional information about technologies at the leading edge of the value added chain of modern optics. We believe that such a profound presentation of optical engineering competence in one book is unique in the field of optics. Thus, many thanks to our co-authors for their enthusiasm, openness and for the hard work they did.

We are especially indebted to the following institutions, named in alphabetic order, where the technologies were developed and applied: Aixtooling GmbH, Berliner Glas GmbH, Carl Zeiss AG, Carl Zeiss SMT AG, Degussa Röhm GmbH & Co. KG, Dünnschicht Technik Tafelmeier, Evatec Ltd, Fisba Optik AG, Fraunhofer Institut IST, Fraunhofer Institut für angewandte Optik und Feinmechanik (IOF), Hochschule für Technik und Wirtschaft Aalen, Inopaq Technologies Sarl, Institute of Ion Physics University of Innsbruck, Jos. Schneider Optische Werke GmbH Kreuznach, Korth Kristalle GmbH, Laser Zentrum Hannover, Leica Camera AG, Leica-Geosystems AG, Leica-Microsystems AG, Leybold Systems GmbH, Meopta-Optika, MSO Jena GmbH, Oerlikon Space AG, OpSys Project Consulting Application Fields, Schott North America Inc., Schott AG; Schneider OM GmbH + Co. KG, Süss Microoptics SA, SwissOptic AG, University of Stuttgart, ViaOptic GmbH, VTD Vakuumtechnik Dresden GmbH.

Many thanks to Norbert Kaiser for his great support in coating technologies. Furthermore we appreciate many fruitful discussions with Klaus-Friedrich Beckstette, Rainer Börret, Claus Gunkel, Susanne Lehnicke, Jose Zimmer and many others.

We are very grateful for the assistance of Mrs Beate Schmitt at Schott AG/Mainz and Mrs Andrea Bormann-Wicki at Leica Geosystems AG, Heerbrugg. They succeeded in organizing on time all chapters into a manageable form; a rather crucial task of coordination with so many authors.

Finally, it is a great pleasure to thank our publishers and, in particular Nick Barber, Techset Composition Ltd., and Tim Lamkins and Eric Pepper from SPIE, for their valuable guidance, suggestions and the great care taken throughout the course of production of this book. Without their professional help this book would never have been finished.

Bernhard Braunecker, Rüdiger Hentschel and Hans Tiziani May 2007.
